Physiotherapy Services

What is it?

In 2012 the team at C435 BFK reported that the project was trialling the use of an on-site physiotherapist. This trial has been so successful that this service has now been extended and established for regular monthly visits.

What services are provided?

- 'Back Attack' toolbox talks covering; improving muscle / joint health and preventing injuries
- Physiotherapists undertaking site visits to understand the working environment and the potential impacts
- Clinical treatments for those requiring physiotherapy intervention
- Display screen equipment assessments.

Success:

All of these have been successful but none more so than the clinical treatment service. There have already been a total of 6 treatments and further 9 referrals to the treatment service, which, considering the short time the service has been available, is a great start! In addition to this, it allows the treatment nurse to refer and manage relevant conditions, and receive feedback on the functional ability of the worker.
